CLAIM AMENDMENTS

1.-38. (Cancelled)

39. (Currently Amended) A method comprising:

receiving, over a global computer network, a request from a first computer system coupled to the global computer network for a second computer system coupled to the global computer network to provide an identification of the second computer system;

<u>in response to the request, providing a visual interface on the second computer system to</u> notify <u>both</u> a user of the second computer system of the request and <u>prompting prompt</u> the user to allow or deny the request; and

in response to the user allowing the request providing a hash value to the first computer system, the hash value being generated by encryption of a key associated with a first computer system with an identifier that identifies the second computer system.

- 40. (Previously Presented) The method of claim 39, wherein the identifier that identifies the second computer system comprises a processor number.
- 41. (Previously Presented) The method of claim 39, wherein the key indicates an address of a web site of the first computer system.
- 42. (Previously Presented) The method of claim 39, wherein the first computer system is located at a remote location relative to the second computer system.

43. (Currently Amended) An article comprising a storage medium readable by a first processor-based system, the storage medium storing instructions to cause a processor of the first processor-based system to:

receive a request over a global computer network from a first computer system coupled to the global computer network for a second computer system to provide an identification of the second computer system;

<u>in response to the request,</u> provide a visual interface on the second computer system to notify <u>both</u> a user of the second computer system of the request and prompt the user to allow or deny the request; and

in response to the user allowing the request, provide a hash value to the first computer system, the hash value being generated by encryption of a key associated with the first computer system with an identifier that identifies the second computer system.

- 44. (Previously Presented) The article of claim 43, wherein the identifier that identifies the second computer system comprises a processor number.
- 45. (Previously Presented) The article of claim 43, wherein the key indicates an address of a web site of the first computer system.
- 46. (Previously Presented) The article of claim 43, wherein the first computer system is located at a remote location relative to the second computer system.

- 47. (Currently Amended) A system comprising:
- a database; and
- a first computer coupled to the database to:

receive a request over a global computer network from a second computer coupled to the global computer network for the first computer to provide an identification of the first computer;

<u>in response to the request, provide a visual interface on the first computer to notify both</u> a user of the first computer of the request and prompt the user to allow or deny the request; and

in response to the user allowing the request, provide a hash value to the second computer, the hash value being generated by encryption of a key associated with the second computer with an identifier that identifies the first computer.

- 48. (Previously Presented) The system of claim 47, wherein the identifier that identifies the first computer comprises a processor number.
- 49. (Previously Presented) The system of claim 47, wherein the key indicates an address of a web site of the second computer.
- 50. (Previously Presented) The system of claim 47, wherein the second computer is located at a remote location relative to the first computer.
